Enhanced Wiring Integrity Systems Project Report

Project No. 140328.

Project findings are presented from the **Enhanced Wiring Integrity System (EWIS) Project**. The wiring system is the infrastructure that links electrical, electromechanical and electronics subsystems. Wiring is truly a critical system that requires new maintenance tools and processes.

Project objectives were to implement a single or common test system to provide solutions that: Are applicable to the joint services - Navy, Air Force, Army, and Marines; Reduce the work-hours expended troubleshooting and repairing materiel electrical wiring systems; Increase the reliability of materiel with preventive and predictive maintenance.

The EWIS project provides improved commercially-available test systems to enhance the troubleshooting and testing capabilities of the maintainers and ultimately improving the overall integrity of electrical wiring systems. The user-friendly product is in use at multiple DoD sites.
